In the 2019-2020 academic year, 68.9% Black pupils and 72.4% of White pupils achieved at least Level 4 + GCSE Maths.

In the 2018-2019 academic year, 70.02% of Black children, compared to 77.07% of White children, were assessed as reaching a Good Level of Development at age 5. Black children were 9.15% less likely than White children to reach a Good Level of Development.

In the 2020-2021 financial year, 2.59% of Black households, compared to 0.33% of White households, were assessed as reaching a Good Level of Development at age 5. Black 16-64 year olds were 64.04%, compared to 77.32% for White 16-64 year olds. Black 16-64 year olds were 17.18% less likely than White 16-64 year olds to be in employment.

The likelihood of outcomes for the Black population compared to the White population. Points to the left of the orange line indicate outcomes that are more likely for the Black population compared to the White population. Points to the right of the orange line indicate outcomes that are more likely for the White population compared to the Black population. A ratio of less than 1 indicates that the outcome is the same for both the Black population and the White population. A ratio of more than 1 indicates the outcome is more likely for the White population compared to the Black population, and a ratio of more than 1 indicates the outcome is more likely for the Black population compared to the White population.
